

## Aquatic Diets General Information

For over 55 years, Zeigler has been producing foods with aquatic species, and today devotes significant research and development toward aquatic animal nutrition. These efforts have resulted in the development of specialized feeds for reproductive improvement, micro-capsulated liquid foods for fish larvae, and highly digestible diets utilizing chelated minerals and stabilized vitamins to help increase nutritional bioavailability. All Zeigler Aquatic Research Diets utilize the latest technologies to help improve fecundity and overall fish health under laboratory tank conditions. Trials have demonstrated that embryo production can be increased significantly in Zebrafish fed the Zeigler Diet.

### Utilization of Aquatic Diets

- Shelf Life:** Use within 3 months after opening. Unopened bags may be stored up to 2 years. To maximize shelf-life and maintain nutritive value, keep stored in a closed container in a cool, dry place away from sunlight. These products have been treated with radiation. Do not irradiate again.
- Sizes:** Zebrafish Diet is a sinking crumble (0.60 - 0.84 mm) and Xenopus Diet is a 3.0 mm floating pellet
- Packaging:** Irradiated resealable foil bag. Zebrafish contains 16 oz per bag and Xenopus contains 12 oz per bag,, each packaged 24 foil bags per case.
- Feeding Instructions:** See individual literature sheets for feeding instructions.
