

Sea Urchin Diets

Product Description

Zeigler Sea Urchin diets are formulated to be complete diets for Sea Urchins to be grown or maintained for research purposes in the laboratory. They are specially formulated to promote maximum growth rate and survival as has been demonstrated in repeated laboratory experiments. The diets utilize highly digestible ingredients which minimize waste and contributes to improved water quality.

Product Features

- Formulated to maximize somatic or whole body growth rate
- Formulated to maximize gonadal development
- Demonstrated to optimize gonadal color, texture and taste
- Available utilizing either purified or semi purified ingredients
- Products available for juveniles or adults grown for somatal development and/or gametogenesis
- Formulas can be customized for specific research projects

Suggested Feeding

Zeigler Sea Urchin diets should be fed one time daily, adding the amount of food to each population of sea urchins that can be consumed within three to four hours. With proper feeding technique, feed conversions should not exceed 2/1.

Scientific references available on request.

Packaging

- 454 g (16 oz.) resealable foil bag
- Packaged 24 per case
- Nitrogen Flushed
- Gamma Irradiation
