

Services and Capabilities

ISO 9001 Certified

Zeigler manufacturing facilities in Gardners and East Berlin, Pennsylvania maintain ISO 9001:2008 Registered Quality Systems. Standardizing services and manufacturing operations into an organized system is an added assurance that customers are always provided with the highest quality products.

Drug-Free Manufacturing Facility

All Zeigler laboratory animal diets are manufactured in a drug-free facility. Strict manufacturing and feed storage procedures at this facility minimize cross contamination of products with undesirable constituents.

Ingredient Quality

Feed ingredients used in Zeigler laboratory animal diets are procured only from vendors with a history of providing high quality ingredients. Ingredients are selected for nutrient consistency and low concentrations of recognized contaminants. Natural ingredients such as small grains and grain by products, alfalfa, and fishmeal are pre-assayed for contaminants to ensure that Zeigler laboratory animal diets are within the guidelines issued by various government agencies.

Fixed Formulas

Zeigler nutritionists recognize that fixed formulations are required to minimize variables that may influence experimental results. Therefore, Zeigler lab diets are not formulated on a least-cost basis, nor altered without the knowledge of the customer.

Nutrient concentrations in Zeigler lab diets are controlled by the procurement of ingredients that contain acceptable specified nutrient concentrations. Reports of nutrient and contaminant assays conducted by independent laboratories are available upon request.

Technical Assistance

Technical support from Zeigler nutritionists and support staff is available to all customers. Assistance is available to resolve problems, explore alternative feeding methodologies, and develop new diet formulations to accommodate specific research requirements.

Zeigler Customers

Government agencies such as National Institutes of Health, Federal Drug Administration, Centers for Disease Control, and National Toxicology Program routinely use Zeigler laboratory animal diets. Zeigler also provides diets for numerous universities, AAALAC accredited animal breeders, pharmaceutical companies, and other institutions involved in biological or biomedical research.

International Activities

Zeigler is committed to the global biomedical research community through the establishment of various international relationships. Experience in feed export and technology transfer is available to assist the international community with various technical challenges related to the laboratory animal feed industry.
